SUSTAINABILITY AT RHENUS LUB

February 2022

We assume responsibility:

Our sustainability measures

Sustainability starts with each individual and brings us together as a community. This is something that we are well aware of as a family-run company; we think in terms of generations and have been firmly committed to sustainability for several years. We assume responsibility. In line with our corporate philosophy, one of our declared goals is to continuously analyse and constantly optimise the product carbon footprint (PCF) and the corporate carbon footprint (CCF). This will ensure that resources are used more sparingly and that we can all enjoy a liveable future.

We would like to provide you with transparent information about our measures in the following:

Product carbon footprint (PCF)

- Rhenus Lub currently calculates the carbon footprint of selected products from the entire rhenus portfolio with the support of an independent institute. The calculated data will be available in the 2nd quarter 2022.

  Please note that industry-wide basic data for a uniform standard will be available from the first half of 2023. These data are calculated by the Association of the German Lubricant Industry (VSI) as part of the Sustainability Initiative of the Lubricant Industry (NaSch). Rhenus Lub is part of this initiative.

Corporate carbon footprint (CCF)

- **Rhenus Lub is a climate neutral company since 2022.** We achieve this by offsetting with internationally recognised climate protection certificates for projects in the areas of wind energy, hydropower, transport and biomass in the countries Turkey, India and the Netherlands.

- The portion of emissions that currently cannot be avoided is compensated for by means of certified carbon offset projects that promote sustainability.

- We work closely with a consulting institute that is well recognised beyond the industry to achieve the ambitious climate neutrality goals.

Let's assume responsibility together for the next generations. The future starts now.
