

MWF check: test and prepare metal working fluid now!

The framework conditions in production are ever-changing. At times, utilisation rates in machining production can vary significantly. Make sure that you are using your metal working fluid (MWF) correctly now to thus be prepared for the future in the best way.

We recommend you test the quality of the MWF you use:

Adapt your MWF to the current utilisation rate situation.

Benefit from savings potential.

We will support you during implementation.

Ask for our technical support specialists and have your MWF status checked now! We provide you with an offer featuring a customised optimisation plan to prepare you for the future!
