MEASUREMENT DATA ACQUISITION MADE EASY

Complete transparency for process participants
thanks to real-time data transmission

rhenus check&care

EASY AND EFFICIENT MEASUREMENT DATA ACQUISITION

Functions

With rhenus check&care, you can make your measurement data acquisition not only easier but also more transparent. Thanks to real-time data transmission, the measurement data is available to all authorised users immediately after input. You can also benefit from significantly improved process efficiency by identifying machines quickly and unambiguously by QR code using a smartphone or tablet. This speeds up the process and minimises the error rate. The corresponding QR codes for the machines are generated directly in the application. Unleash the full potential within the modern user interface thanks to numerous filter options and diagrams – and identify any areas with a need for action immediately and at a glance!

Advantages

- Complete transparency for process participants thanks to real-time data transmission via the cloud
- Seamless data acquisition thanks to paperless documentation
- Web-based application with no need for installation on terminal devices
- No need for access to company network
- Acquisition and storage of measurement data in accordance with the Technical Rules for Hazardous Substances (TRGS)

Our service

- Directly retrievable standard values for rhenus metalworking fluids and additives
- Direct access to safety data sheets and technical data sheets within the application
- Other regularly defined parameters can be added individually
- Updates and expansions
- Can optionally be combined with the rhenus lubrining® service

Technical requirements

rhenus check&care is web-based and can therefore be used on iOS, Android and desktop and across multiple devices. All you need with you on site is a smartphone or tablet with a web browser and internet access (wireless LAN or 4G/5G).

We'll be delighted to provide you with further information
